

Northwell Health Plainview Hospital

Façade Modernization and Rainscreen

Plainview, New York

Facility Upgrades

Constructed in phases beginning in the 1950s, Plainview Hospital sought to develop a cohesive and modern look to the hodgepodge of structures.

Welcoming Entry

The visitor entrance is a tower emanating light as a beacon welcoming all, and patients and visitors pass a lush living wall that is a key element of the sustainable design goals of the project.

Cohesive Coordination

The project is designed in BIM and other advanced technologies to capture and analyze a wide range of information, streamline the design process, and effectively convey a cohesive design.
