

Westchester Medical Center

In-Patient Rooms Renovation

Valhalla, New York

Phased Project

To maintain hospital capacity, this project included a multi-phase renovation to the seven floors of in-patient rooms.

Communication and Collaboration

We incorporated feedback gleaned from the tours of the full-scale mock-up and created a design that meets the needs of staff, doctors, patients and their families.

Ongoing Partnership

Renovation of the first of seven floors was completed and passed inspections for full occupancy. Additional phases of renovation are currently underway.
